

VISHNU MOHANAN

Senior Product Manager – AI Products, Growth & Platform

Dublin, Ireland | mohanany@gmail.com | LinkedIn:

<https://www.linkedin.com/in/mohanany/> | **Portfolio:** vishnu.fyi

SUMMARY

Senior product manager with 9+ years at HubSpot, shipping AI products to a platform of 300K+ customers. I own personalisation, connectors and Slack for Breeze Assistant, HubSpot's AI assistant, and previously led the company's #1 2025 priority: AI-led onboarding for Professional customers. I set direction across teams, prove impact with evals and controlled experiments, and prototype in code myself. Recent outcomes: doubled onboarding plan conversion (33% to 66%) with an agent validated against a golden eval set, doubled weekly Breeze Projects usage within two weeks of a relaunch, and grew mobile reporting to 55K weekly users.

CORE SKILLS

AI product strategy • LLM evals & prompt design • Agents, MCP & integrations • Personalisation • PLG & onboarding • Mobile platform • Product analytics (SQL) • Cross-functional leadership

EXPERIENCE

HubSpot - Dublin, Ireland

Senior Product Manager, Breeze Assistant - Personalisation, Connectors and Surfaces | 2025–Present

- Wrote the strategy and charter for Breeze Assistant personalisation, uniting three engineering sub-teams (Projects, Connectors, Slack) under one north-star metric for configured, connected and cross-surface use.
- Owned Breeze Projects, the personalisation layer for Breeze Assistant. Found 86% of new projects launched with no context and rebuilt creation around templates built from usage data. Weekly project chats doubled in two weeks, and project users return 1.6x as often as the average Breeze Assistant user.
- Took over Breeze Assistant in Slack and treated adoption as a conversion problem: 75x more people saw its Slack cards than @mentioned it. Weekly @mention users grew 6x+ in a month.

- Led customer discovery (10+ interviews in 3 weeks) to set connector priorities, then aligned three teams on rebuilding connectors on MCP.
- Took over the AI Search product after the founder PM departed; rebuilt focus and execution rhythm, and made the roadmap clear to the rest of the org.

Senior Product Manager, Growth & Onboarding | 2024–2025

- Led HubSpot's #1 2025 product priority: product-led onboarding for Professional-tier customers.
- Launched an AI onboarding agent that turns a customer's goals into a personalised setup plan. Built its golden eval set from 100 onboarding-specialist calls and wrote its system prompt; plan conversion doubled from 33% to 66%.
- Shifted onboarding from "setup complete" to "value realised," reducing friction in the early flow for sales reps and driving +20 points in Week-1 visits and +26 points in Month-1 usage versus control.
- Increased Professional activation by 23% (activation = any of 13 key actions in the first 14 days) across Sales Hub, and moved \$270K of MRR onto the product-led path instead of paid human onboarding. Framework subsequently scaled to Marketing, Service, Commerce, and Content Hub.
- Served as interim SPM for Growth Coaching and Growth Core for ~6 months during leadership turnover; managed three roadmaps at once and kept P0 delivery on track.
- Mentored two PMs; supported one promotion to Senior PM within a year.

Senior Product Manager, Mobile Reporting & Platform | 2021–2024

- Built and shipped mobile reporting for dashboards; mobile dashboard WAUs grew to 55,000 (about 1 in 5 mobile WAUs).
- Improved retention for mobile reporting from 27% to 43%, and increased cross-platform usage (web viewers who also used mobile weekly) from 3% to 10%.
- Led the React Native migration that sped up parity delivery: Quotes launched on iOS and Android simultaneously in ~2 months vs. a prior estimate of ~6 months, using shared components and business logic.

Product Manager / Associate Product Manager, Mobile | 2019–2021 (promoted from APM to PM in 13 months)

- Shipped HubSpot's first mobile AI feature (computer-vision business card scanner), increasing contact creation volume by 4.5x.
- Shipped Today View, the daily home for sales reps: 29% of reps engaged daily, it lifted Android retention ~2 points, and it ranked HubSpot's #1 mobile sales feature for two years.
- Delivered enterprise-grade mobile SSO, removing a blocker for upmarket Sales Hub adoption.

Founding Support Engineer / Product Expert (EMEA) | 2015–2019

- One of the first 10 hires for HubSpot Support in Dublin; co-designed the interview loop with senior leaders and ran 25+ interviews as the site scaled from 10 to 50+ support engineers.
- Created BIRA (Bug & Idea Reporting), a pipeline for validated frontline feedback to reach Product; it became the seed for today's company-wide Voice of the Customer program.

BUILDING

- laceup.club, tennis club SaaS I built and run: 148 clubs, 40,000 match records in production (Next.js, Supabase, Claude Code).
- Prototype AI features in code before engineering starts; a Lovable prototype changed the onboarding agent's direction before production work began.
- Run my own agentic workflows (Claude Code + MCP) for daily briefings and analysis across Slack, calendar and data warehouse.
- Tools: Claude Code, Lovable, Vercel, SQL, Amplitude, Hex, Looker.

EDUCATION

Trinity College Dublin

- PhD, Botany (2015) — HEA Scholarship (EUR 87k).
- BA (Hons), Natural Sciences (2011) — SFI Scholarship.

INTERESTS

Tennis, cricket, and building small apps for community teams and clubs.
